3 ways of installing it

Install the Visual Studio Code extension

Install with .NET Tool

Install with Windows MSI (Windows Only)

VS Code

The image shows the VS Code extension marketplace interface for the 'Power Platform Tools' extension. On the left is the extension's logo, a green hexagon with a white geometric pattern. To the right of the logo, the extension name 'Power Platform Tools' is displayed in a large, bold font, with the version 'v2.0.25' in a smaller font to its right. Below the name, the publisher 'Microsoft' is listed with a verified badge and the website 'microsoft.com'. To the right of this, the download count '122,928' and a star rating of four stars out of five (with '(4)' reviews) are shown. A description line reads 'Tooling to create Power Platform solutions & packages, manage Power'. Below the description are three buttons: 'Set File Icon Theme' (blue), 'Disable' (blue), and 'Uninstall' (blue with a dropdown arrow). To the right of these buttons are icons for refreshing and settings. A dropdown menu is open from the 'Uninstall' button, showing two options: 'Uninstall' and 'Install Another Version...'. Below the buttons, a status message says 'This extension is enabled globally.'

Authentication

Authentication

Usage: pac auth create [--name] [--username] [--password] [--applicationId] [--clientSecret] [--certificateDiskPath] [--certificatePassword] [--tenant] [--cloud
erated] [--azureDevOpsFederated] [--environment] [--kind] [--url]

--name	The name you want to give to this authentication profile (maximum 30 characters). (alias: -n)
--username	Optional: The username to authenticate with; shows Microsoft Entra ID dialog if not specified. (alias: -un)
--password	Optional: The password to authenticate with (alias: -p)
--applicationId	Optional: The application ID to authenticate with. (alias: -id)
--clientSecret	Optional: The client secret to authenticate with (alias: -cs)
--certificateDiskPath	Optional: The certificate disk path to authenticate with (alias: -cdp)
--certificatePassword	Optional: The certificate password to authenticate with (alias: -cp)
--tenant	Tenant ID if using application ID/client secret or application ID/client certificate. (alias: -t)
--cloud	Optional: The cloud instance to authenticate with (alias: -ci) Values: Public, UsGov, UsGovHigh, UsGovDod, China
--deviceCode	Use the Microsoft Entra ID Device Code flow for interactive sign-in. (alias: -dc)
--managedIdentity	Use Azure Managed Identity. (alias: -mi)
--githubFederated	(Preview) Use GitHub Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -ghf)
--azureDevOpsFederated	(Preview) Use Azure DevOps Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -adof)
--environment	Default environment (ID, url, unique name, or partial name). (alias: -env)
--kind	(deprecated) The kind of authentication profile you're creating. (alias: -k)
--url	(deprecated) The resource URL to connect to (alias: -u)

Authentication

Usage: pac auth create [--name] [--username] [--password] [--applicationId] [--clientSecret] [--certificateDiskPath] [--certificatePassword] [--tenant] [--cloud
erated] [--azureDevOpsFederated] [--environment] [--kind] [--url]

--name	The name you want to give to this authentication profile (maximum 30 characters). (alias: -n)
--username	Optional: The username to authenticate with; shows Microsoft Entra ID dialog if not specified. (alias: -un)
--password	Optional: The password to authenticate with (alias: -p)
--applicationId	Optional: The application ID to authenticate with. (alias: -id)
--clientSecret	Optional: The client secret to authenticate with (alias: -cs)
--certificateDiskPath	Optional: The certificate disk path to authenticate with (alias: -cdp)
--certificatePassword	Optional: The certificate password to authenticate with (alias: -cp)
--tenant	Tenant ID if using application ID/client secret or application ID/client certificate. (alias: -t)
--cloud	Optional: The cloud instance to authenticate with (alias: -ci) Values: Public, UsGov, UsGovHigh, UsGovDod, China
--deviceCode	Use the Microsoft Entra ID Device Code flow for interactive sign-in. (alias: -dc)
--managedIdentity	Use Azure Managed Identity. (alias: -mi)
--githubFederated	(Preview) Use GitHub Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -ghf)
--azureDevOpsFederated	(Preview) Use Azure DevOps Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -adof)
--environment	Default environment (ID, url, unique name, or partial name). (alias: -env)
--kind	(deprecated) The kind of authentication profile you're creating. (alias: -k)
--url	(deprecated) The resource URL to connect to (alias: -u)

Authentication

```
Usage: pac auth create [--name] [--username] [--password] [--applicationId] [--clientSecret] [--certificateDiskPath] [--certificatePassword] [--tenant] [--cloud  
erated] [--azureDevOpsFederated] [--environment] [--kind] [--url]
```

```
--name                The name you want to give to this authentication profile (maximum 30 characters). (alias: -n)
--username            Optional: The username to authenticate with; shows Microsoft Entra ID dialog if not specified. (alias: -un)
--password            Optional: The password to authenticate with (alias: -p)
--applicationId        Optional: The application ID to authenticate with. (alias: -id)
--clientSecret         Optional: The client secret to authenticate with (alias: -cs)
--certificateDiskPath  Optional: The certificate disk path to authenticate with (alias: -cdp)
--certificatePassword  Optional: The certificate password to authenticate with (alias: -cp)
--tenant              Tenant ID if using application ID/client secret or application ID/client certificate. (alias: -t)
--cloud               Optional: The cloud instance to authenticate with (alias: -ci)
                     Values: Public, UsGov, UsGovHigh, UsGovDod, China
--deviceCode          Use the Microsoft Entra ID Device Code flow for interactive sign-in. (alias: -dc)
--managedIdentity      Use Azure Managed Identity. (alias: -mi)
--githubFederated      (Preview) Use GitHub Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -ghf)
--azureDevOpsFederated (Preview) Use Azure DevOps Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -adof)
--environment          Default environment (ID, url, unique name, or partial name). (alias: -env)
--kind                (deprecated) The kind of authentication profile you're creating. (alias: -k)
--url                 (deprecated) The resource URL to connect to (alias: -u)
```

Authentication -mi

Usage: pac auth create [--name] [--username] [--password] [--applicationId] [--clientSecret] [--certificateDiskPath] [--certificatePassword] [--tenant] [--cloudInstance] [--azureDevOpsFederated] [--environment] [--kind] [--url]

--name	The name you want to give to this authentication profile (maximum 30 characters). (alias: -n)
--username	Optional: The username to authenticate with; shows Microsoft Entra ID dialog if not specified. (alias: -un)
--password	Optional: The password to authenticate with (alias: -p)
--applicationId	Optional: The application ID to authenticate with. (alias: -id)
--clientSecret	Optional: The client secret to authenticate with (alias: -cs)
--certificateDiskPath	Optional: The certificate disk path to authenticate with (alias: -cdp)
--certificatePassword	Optional: The certificate password to authenticate with (alias: -cp)
--tenant	Tenant ID if using application ID/client secret or application ID/client certificate. (alias: -t)
--cloud	Optional: The cloud instance to authenticate with (alias: -ci) Values: Public, UsGov, UsGovHigh, UsGovDod, China
--deviceCode	Use the Microsoft Entra ID Device Code flow for interactive sign-in. (alias: -dc)
--managedIdentity	Use Azure Managed Identity. (alias: -mi)
--githubFederated	(Preview) Use GitHub Federation for Service Principal Auth; requires --tenant and --applicationId arguments (alias: -ghf)

--kind	(deprecated) The kind of authentication profile you're creating. (alias: -k)
--url	(deprecated) The resource URL to connect to (alias: -u)

Catalog

Catalog

```
C:\Projects\pac>pac catalog
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
Online documentation: https://aka.ms/PowerPlatformCLI
Feedback, Suggestions, Issues: https://github.com/microsoft/powerplatform-build-tools/discussions
```

Help:

Commands for working with Catalog in Power Platform

Commands:

Usage: `pac catalog [list] [submit] [install] [status] [update] [create-submission]`

<code>list</code>	List all published catalog items from the current Dataverse organization.
<code>submit</code>	Submit catalog approval request.
<code>install</code>	Install a catalog item to the target environment.
<code>status</code>	Get status of the catalog install/submit request.
<code>update</code>	Update settings for the catalog.
<code>create-submission</code>	Create catalog submission document. Note: This command will be removed in a future release.

copilot

Copilot

```
C:\Projects\pac>pac copilot
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
Online documentation: https://aka.ms/PowerPlatformCLI
Feedback, Suggestions, Issues: https://github.com/microsoft/powerplatform-build-tools/discussions

Help:
Tools and utilities for copilot management

Commands:
Usage: pac copilot [list] [status] [extract-translation] [merge-translation] [extract-template] [create] [publish] [model]

list                List of copilots in the current or target Dataverse environment.
status              Poll the deployment status of a specified copilot in the current or target Dataverse environment.
extract-translation Extracts file containing localized content for one or more bots.
merge-translation   Merge files containing localized content for one or more bots.
extract-template     Extracts a template file from an existing copilot in an environment.
create              Creates a new copilot using an existing template file as the reference.
publish              Publish a Custom Copilot
model               Tools and utilities for model management
```

Data

Import – Export

Data Export

```
C:\Projects\pac>pac data export
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
```

```
Usage: pac data export [--environment] --schemaFile [--dataFile] [--overwrite] [--verbose]
```

<code>--environment</code>	Specifies the target Dataverse. The value may be a Guid or absolute https URL. When not specified, the active organization selected for the current auth profile will be used. (alias: -env)
<code>--schemaFile</code>	Schema file name. It can be created using the Configuration Migration Tool. (alias: -sf)
<code>--dataFile</code>	File name for data zip file. Default data.zip (alias: -df)
<code>--overwrite</code>	Allow overwrite of the output data file if it already exists. (alias: -o)
<code>--verbose</code>	Output more diagnostic information during data import/export (alias: -v)

Data Import

```
C:\Projects\pac>pac data import
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
```

```
Usage: pac data import [--environment] --data [--connection-count] [--verbose] [--dataDirectory]
```

<code>--environment</code>	Specifies the target Dataverse. The value may be a Guid or absolute https URL. When not specified, the active organization selected for the current auth profile will be used. (alias: <code>-env</code>)
<code>--data</code>	Zip file or directory name with data for import. (alias: <code>-d</code>)
<code>--connection-count</code>	Number of parallel connections to use during import. Default: 5 (alias: <code>-c</code>)
<code>--verbose</code>	Output more diagnostic information during data import/export (alias: <code>-v</code>)
<code>--dataDirectory</code>	(deprecated) Directory name with data for import. (alias: <code>-dd</code>)

modelbuilder

The crmsvcutil killer

Modelbuilder

```
Usage: pac modelbuilder build [--environment] [--suppressGeneratedCodeAttribute] [--language] [--namespace] [--serviceContextName] [-  
-generatesdkmessages] [--emitentityetc] [--emitvirtualattributes] [--emitfieldsclasses] [--entitynamesfilter] [--messagenamesfilter]  
-outdirirectory [--entitytypesfolder] [--messagestypesfolder] [--optionsetstypesfolder] [--generateGlobalOptionSets] [--writesettingsT  
emplateFile] [--settingsTemplateFile] [--suppressINotifyPattern] [--logLevel]
```

package

package

```
C:\Projects\pac\packages>pac package
```

```
Microsoft PowerPlatform CLI
```

```
Version: 1.34.4+gbc3320d
```

```
Online documentation: https://aka.ms/PowerPlatformCLI
```

```
Feedback, Suggestions, Issues: https://github.com/microsoft/powerplatform-build-tools/discussions
```

```
Help:
```

```
Commands for working with Dataverse package projects
```

```
Commands:
```

```
Usage: pac package [init] [add-external-package] [add-solution] [add-reference] [deploy] [show]
```

init	Initializes a directory with a new Dataverse package project
add-external-package	Adds a package that is external to the Dataverse solution system to a Package Deployer Package project.
add-solution	Adds a prebuilt Dataverse solution file to a Package Deployer Package project.
add-reference	Adds reference to Dataverse solution project
deploy	Deploys package to Dataverse
show	Shows details of Dataverse package

Power Pages

Download pages

pages

```
C:\Users\rmounla>pac pages
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d

Help:
Commands for working with Power Pages website.

Commands:
Usage: pac pages [list] [download] [migrate-datamodel] [upload] [bootstrap-migrate]

list                List all Power Pages websites from the current Dataverse environment.
download            Download Power Pages website content from the current Dataverse environment.
migrate-datamodel   Manage data model migration for your Power Pages website.
upload              Upload Power Pages website content to current Dataverse environment.
bootstrap-migrate   Migrates HTML code from bootstrap V3 to V5.
```

PCF

PCF

```
C:\Users\rmounla>pac pcf
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
```

Help:

Commands for working with Power Apps component framework projects

Commands:

Usage: pac pcf [init] [push] [version]

init	Initializes a directory with a new Power Apps component framework project
push	Import the Power Apps component framework project into the current Dataverse organization
version	Patch version for controls

Pipelines

pac deploy

The screenshot displays the Power Apps Pipelines management interface. The top navigation bar includes the 'Power Apps' logo, a search bar, and the current environment 'Pipeline Dev'. The left sidebar contains navigation links: 'Back to solutions', 'Overview', 'Objects', 'History', and 'Pipelines' (which is selected). The main content area is titled 'Pipelines' and includes a 'Preview' button. Below this, a descriptive paragraph explains the importance of healthy application lifecycle management. A dropdown menu shows 'ABC Pipeline' is selected. Two tabs, 'Details' and 'Run history', are visible, with 'Details' being the active tab. The pipeline visualization consists of three stages: 'Development', 'Test stage', and 'Production stage'. The 'Development' stage shows the 'Solution version' as '1.0.0.0'. The 'Test stage' is currently active, showing a progress bar and the message 'Currently deploying version 1.0.0.1'. The 'Production stage' is the final stage in the sequence. Arrows indicate the flow from Development to Test, and then to Production. Each stage has a 'Go to this environment' link and a 'Deploy here' button.

Power Apps Search Environment < Pipeline Dev

Pipelines Preview

As your app advances, you'll start sharing it to be used in your organization. As it gets widely adopted, it's important to practice healthy application lifecycle management by building securely in an isolated location so the people using your app don't run into issues while you work on it. Once everything is ready, you'll move it to a more permanent place and share there. [Learn more](#)

Pipeline

Commands for working with Dataverse solution projects

Commands:

Usage: pac solution [init] [add-reference] [list] [delete] [online-version] [version] [import] [export] [clone] [publish] [upgrade] [add-license] [sync]

init	Initializes a directory with a new Dataverse solution project
add-reference	Adds a reference from the project in the current directory to the project at 'path'
list	List all Solutions from the current Dataverse organization
delete	Delete a solution from Dataverse in the current environment.
online-version	Sets version for solution loaded in Dataverse.
version	Update build or revision version for the solution.
import	Import the solution into Dataverse.
export	Export a solution from Dataverse.
clone	Create a solution project based on an existing solution in your organization.
publish	Publishes all customizations
upgrade	Apply solution upgrade
add-license	Add license and plan info to the solution.
check	Upload a Dataverse solution project to run against the Power Apps Checker service.
create-settings	Create a settings file from solution zip or solution folder.
pack	Package solution components on local filesystem into solution.zip (SolutionPackager).
unpack	Extract solution components from solution.zip onto local filesystem (SolutionPackager).
add-solution-component	Add one or more solution components to the target unmanaged solution in Dataverse.
sync	Sync the current Dataverse solution project to the current state of the solution in your organization.

Solution

```
C:\Projects\pac>pac solution init
```

```
Microsoft PowerPlatform CLI
```

```
Version: 1.34.4+gbc3320d
```

```
Usage: pac solution init --publisher-name --publisher-prefix [--outputDirectory]
```

--publisher-name	Name of the Dataverse solution publisher (alias: -pn)
--publisher-prefix	Customization prefix value for the Dataverse solution publisher (alias: -pp)
--outputDirectory	Output directory (alias: -o)

Test

■ Test

```
C:\Projects\pac\packages>pac test run
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d
```

```
Usage: pac test run --test-plan-file --environment-id --tenant [--output-directory] [--domain]
```

<code>--test-plan-file</code>	Path to the Test Plan file (alias: <code>-test</code>)
<code>--environment-id</code>	Environment ID for the app to be tested. (alias: <code>-env</code>)
<code>--tenant</code>	Tenant ID for the app being tested (alias: <code>-t</code>)
<code>--output-directory</code>	Path to save test output and logs (alias: <code>-o</code>)
<code>--domain</code>	The player domain for the app being tested (alias: <code>-d</code>)
	Values: Public, Preview, UsGov, UsGovHigh, UsGovDoD, Mooncake

Tool

Tool

```
C:\Users\rmounla>pac tool
Microsoft PowerPlatform CLI
Version: 1.34.4+gbc3320d

Help:
Power Platform tools that can be installed and launched.

Commands:
Usage: pac tool [list] [admin] [maker] [prt] [cmt] [pd]

list          List the launchable tools and their local install state and version.
admin         Launch Power Platform Admin Center for the current environment.
maker         Launch Power Apps Maker Portal for the current environment.
prt           Launch Plug-in Registration Tool (PRT).
cmt           Launch Configuration Migration Tool (CMT).
pd            Launch Package Deployer (PD).
```

Learn

<https://learn.microsoft.com/en-us/power-platform/developer/cli/introduction>

admin	
list	List all envs from your tenant.
create	Create a DV instance in your tenant.
backup	Takes a manual backup of your env.
set-backup-retention-period	Set the backup retention period in days as provided. Valid values are: 7, 14, 21, 28.
delete	Deletes the env from your tenant.
reset	Reset the env from your tenant.
list-backups	List all backups of your env.
restore	Restores an env to a given backup.
copy	Copy source env to destination env.
create	This command sets the status of all the operations in progress.
assign-user	Assign a user to a target DV env with specified security role.
assign-group	Assign group to target DV env with specified security role.
list-app-templates	List all supported DV templates or model-driven apps in D365.
create-service-principal	Add Microsoft Entra ID application and associated application user to the DV env.
list-service-principal	List Microsoft Entra ID applications which have access to DV.
set-governance-config	Enable, disable, and edit managed envs.
list-tenant-settings	List tenant settings.
update-tenant-settings	Update tenant settings.
application	Work with Microsoft Entra ID applications.
set-runtime-state	Update env administration mode.
application	
list	List available DV applications from AppSource.
install	Install DV application to given env.
auth	
create	Create and store authentication profiles on this computer.
list	List the authentication profiles stored on this computer.
select	Select which authentication profile should be active.
delete	Delete a particular authentication profile.
update	Update name or target env of an existing authentication profile.
name	Name or rename an existing authentication profile.
clear	Clear all authentication profiles stored on this computer.
who	Display information about currently selected authentication profile.
canvas	
download	Download canvas app as msapp file.
list	List canvas apps.
pack	(Preview) Pack sources into an msapp file.
unpack	(Preview) Extract an msapp file into sources.
validate	(Preview) Validate the .ga.json source for an unsigned msapp file.
create	Generate a canvas app from a custom connector.
catalog	
list	List all published catalog items from the current DV org.
submit	Submit catalog approval request.
install	Install a catalog item to the target env.
status	Get status of the catalog install/submit request.
update	Update settings for the catalog.
create-submission	Create catalog submission document. (will be removed in a future)
connection	
create	Create new DV connection.
delete	Delete DV connection.
list	List all connections.
update	Update DV connection.
connector	
list	List the connector registered in DV.
init	Initializes a new API Properties file for a connector.
create	Creates a new row in the connector table in DV.
download	Download a Connector's OpenAPIDefinition and API Properties file.
update	Updates a Connector Entry in DV.
copilot	
list	List of copilots in the current or target DV env.
status	Get the deployment status of a specified copilot in the current or target DV env.
extract-translation	Extracts file containing localized content for one or more bots.
merge-translation	Merge files containing localized content for one or more bots.
extract-template	Extracts a template file from an existing copilot in an env.
create	Creates a new copilot using an existing template file as the reference.
publish	Publish a Custom Copilot.
model	Tools and utilities for model management.
data	
export	Export data.
import	Import data.
env	
who	Displays information about the current DV org.
list	List all of the DV orgs the user has access to.
fetch	Performs Fetch/MK query against DV.
list-settings	List env settings.
update-settings	Update env settings.
select	Select default org for current authentication profile.
model/builder	
build	Builds a code model for DV APIs and Tables.
package	
init	Initializes a directory with a new DV package project.
add-external-package	Add a package that is external to the DV solution system to a Package Deployer Package project.
add-solution	Add a prebuilt DV solution file to a Package Deployer Package project.
add-reference	Add reference to DV solution project.
deploy	Deploy package to DV.
show	Shows details of DV package.
pages	
list	List all Power Pages websites from the current DV env.
download	Download Power Pages website content from the current DV env.
migrate-datamodel	Migrate data model migration for your Power Pages website.
upload	Upload Power Pages website content to current DV env.
bootstrap-migrate	Migrates HTML code from bootstrap v3 to v5.
pcf	
init	Initializes a directory with a new Power Apps component framework project.
push	Import the Power Apps component framework project into the current DV org.
version	Patch version for controls.
pipeline	
list	List Pipelines.
deploy	Start pipeline deployment.
plugin	
init	Initializes a directory with a new DV plug-in class library.
push	Import plug-in into DV.
power-fx	
ngpl	(Preview) Launch interactive Power Fx Read-Eval-Print Loop.
run	(Preview) Run a file of Power Fx instructions.
solution	
init	Initializes a directory with a new DV solution project.
add-reference	Add a reference from the project in the current directory to the project at path.

Session Feedback Surveys

We really want to hear from YOU!

In the pursuit of making next year's Power Platform Community Conference even better, we want to hear your feedback about this session.

Here's How -

- *Simply go to the Whova App on your smartphone*
- *Scroll down on the Power Platform Community Conference Homepage to 'Additional Resources' to click "Surveys'.*
- *Click Session Feedback.*
- *Scroll down to find this session title.*
- *Complete the session feedback survey.*
- *Finally, click 'Submit'*

It's just that easy!
