Agenda

Framing: Scale & Enterprise apps ~~Enterprise apps~~ Business critical

- What do we mean by scaling?
- What does Business critical mean to you?

Customer Case study: Chevron

- Solution ALM at Chevron

Latest and greatest: Demos

- Preferred Solution
- Delegated Deployment
- Pipelines + Source Code integration
- Pipeline Onramps
- Discoverable pipeline custom host
- And more... 😊

Event code: 3584

What do we mean when we talk about scaling
Power Platform adoption?

Technology Adoption Maturity Model

What do we mean by Business critical applications?

What does business critical mean to you?

- Is every digital solution business critical?
- Does tech influence the importance?
- Has your organization scaled building solutions?

Is every digital solution business critical?

Is every digital solution business critical?

Let's look a real world, anonymous, example of Power Apps in a single organization.

A real example organization, No. of Power Apps by No. of monthly active users

This organization has >136,000 apps!

Is every digital solution business critical?

94% of apps have 0 monthly active users. **It's likely many are 'test 123' apps.**

A real organization, total Power Apps by monthly active users

ActiveUsers ● A. 0 ● B. 1 ● C. 2 - 10 ● D. 11 - 100 ● E. 101 - 1,000 ● F. >1,000

*94% of apps have 0
monthly active users*

Is every digital solution business critical?

However, it's likely **some apps** are used quarterly or semi-annually, and **important when needed**.

A real organization, total Power Apps by monthly active users

ActiveUsers ● A. 0 ● B. 1 ● C. 2 - 10 ● D. 11 - 100 ● E. 101 - 1,000 ● F. >1,000

E.g. An app that's only used quarterly will have 0 users some months. Like apps supporting quarterly financial reports.

Is every digital solution business critical?

At the other extreme, this organization has 53 apps with >1,000 users!

A real example organization, No. of Power Apps by No. of monthly active users

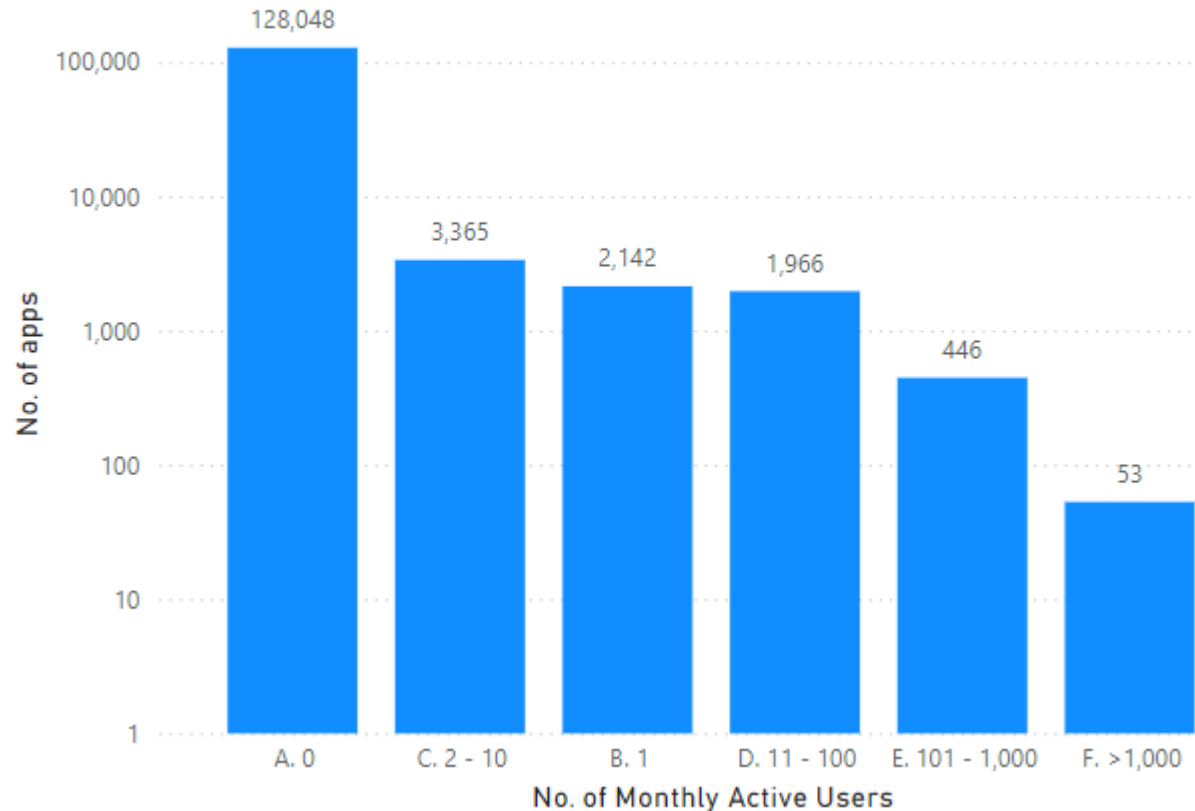

Any failure that impacts >1,000 users likely impacts business productivity.

53 apps with >1,000 users!

Is every digital solution business critical?

We know from your feedback, the audience size doesn't dictate business importance!

A real example organization, No. of Power Apps by No. of monthly active users

Business impact dictates business importance.

We recommend identifying the solutions your business is dependent on!

Does tech influence the importance?

Does tech influence importance?

The market has proven no. Tech is a means to an end. It changes over time.

Does tech influence importance?

Technologies that rise in popularity correlate with faster-time-to-value and proven reliability.

Does tech influence importance?

We're here because we're proving faster-time-to-value along with reliability with Power Platform.

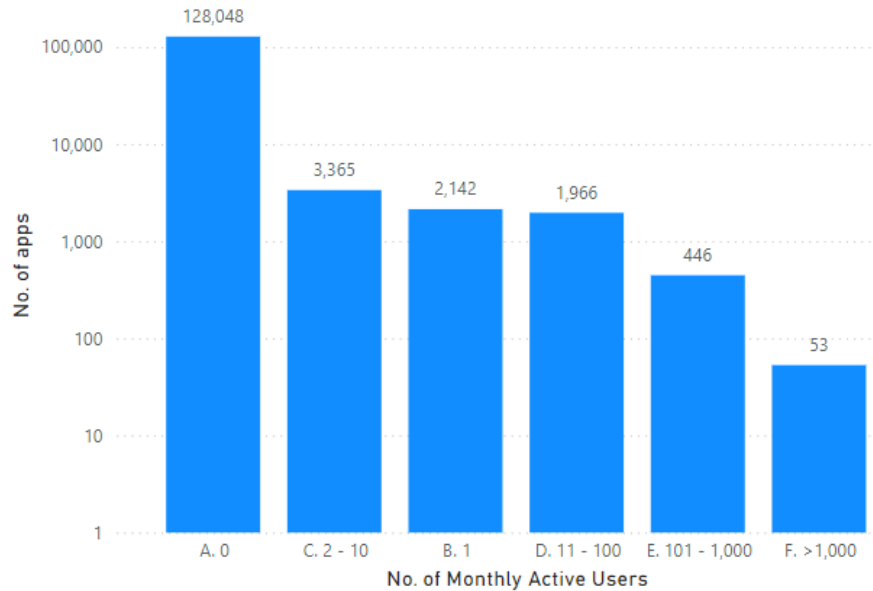

Has your org scaled building critical solutions?

Has your org scaled building critical solutions?

Like our anonymous example, **many organizations have thousands of digital solutions.**

A real example organization, No. of Power Apps by No. of monthly active users

Has your org scaled building critical solutions?

How many solutions does your business have?

- Less than 100?
- Less than 1,000?
- Less than 1,000?
- Less than 10,000?
- More than 10,000?

Has your org scaled building critical solutions?

How many solutions does your business have?

- Less than 100?
- Less than 1,000?
- Less than 1,000?
- Less than 10,000?
- More than 10,000?

Do you know which solutions your business has the greatest dependency?

Has your org scaled building critical solutions?

Today, we'll focus on **capabilities that simplify application lifecycle management** (ALM)?

ALM's purpose:

1. Reinforce high-availability and high-reliability in production
2. Allow Makers to edit digital assets safely, outside of production.

Has your org scaled building critical solutions?

Wouldn't it be great to see a real-world example of an organization that has scaled building solutions using Power Platform?

Chevron

A case study in managing and scaling business critical solutions in their organization.

Content removed due to organizational policy

Application Lifecycle Management at scale

1.0

2.0

3.0

Manual ALM

Citizen devs & small projects

Simple and useful, but lacks visibility, security, governance, and quality control

Inefficient and error prone

Tools & accelerators

Split by persona – for citizens or professionals. Not both.

Enterprise-grade CI/CD with extremely **high complexity**

Drives velocity only for **certain projects** while alienating others

High setup costs per project

Native

Democratized for **all personas**

Enterprise-grade CI/CD with **low complexity**

Drives velocity for **all projects**

Lower TCO at **scale**

Native ALM empowers **every** developer

Citizen developers

IT professionals

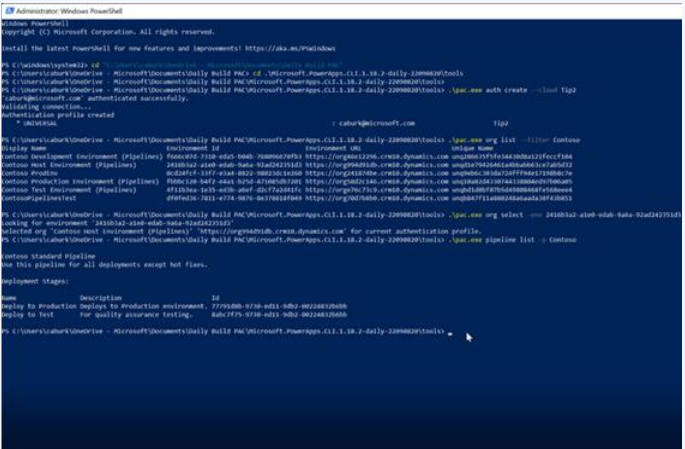

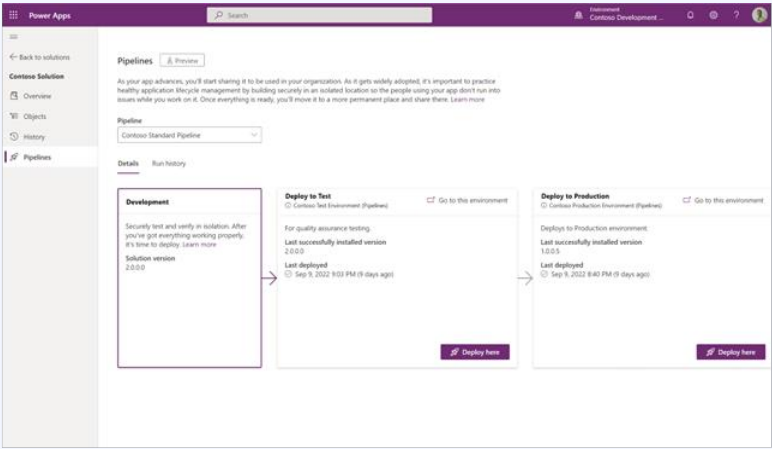

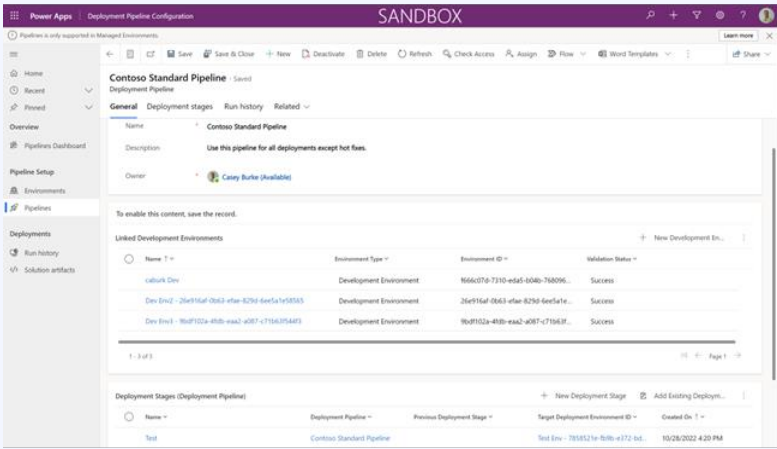

Pro developers

Pipelines kickstarted native ALM

Announced at MPPC 2022

Pipelines simplify ALM for all makers

Setup Pipeline in < 2 min

Initiate automated deployments

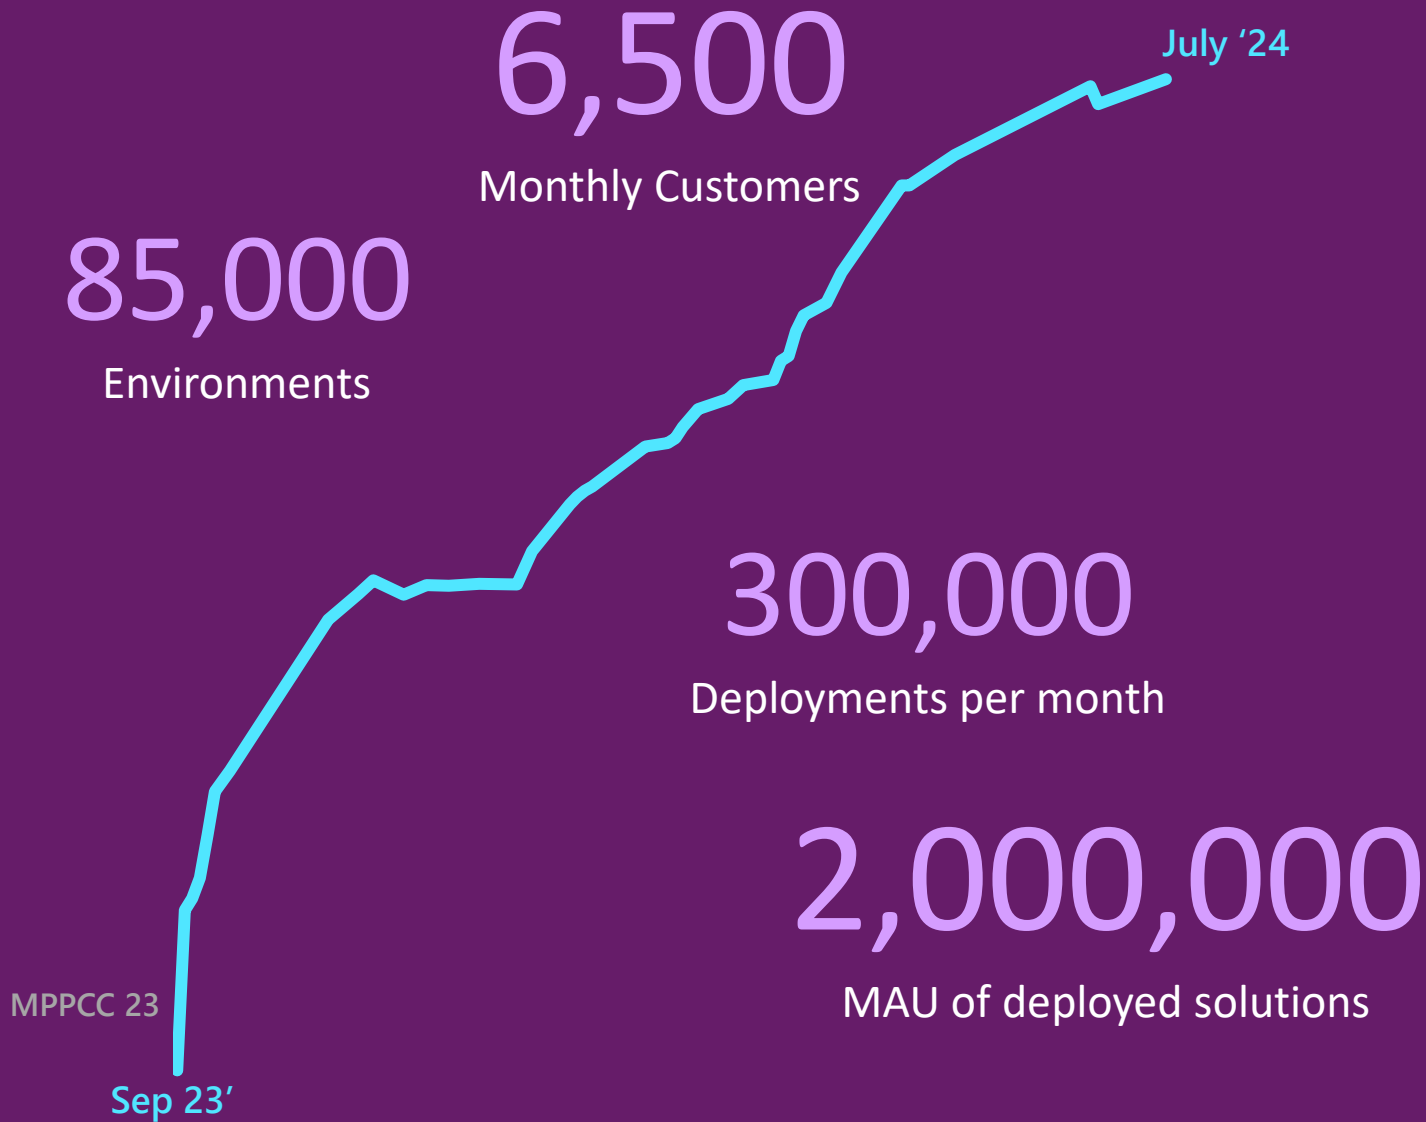

Simplified tasks

Thank You!

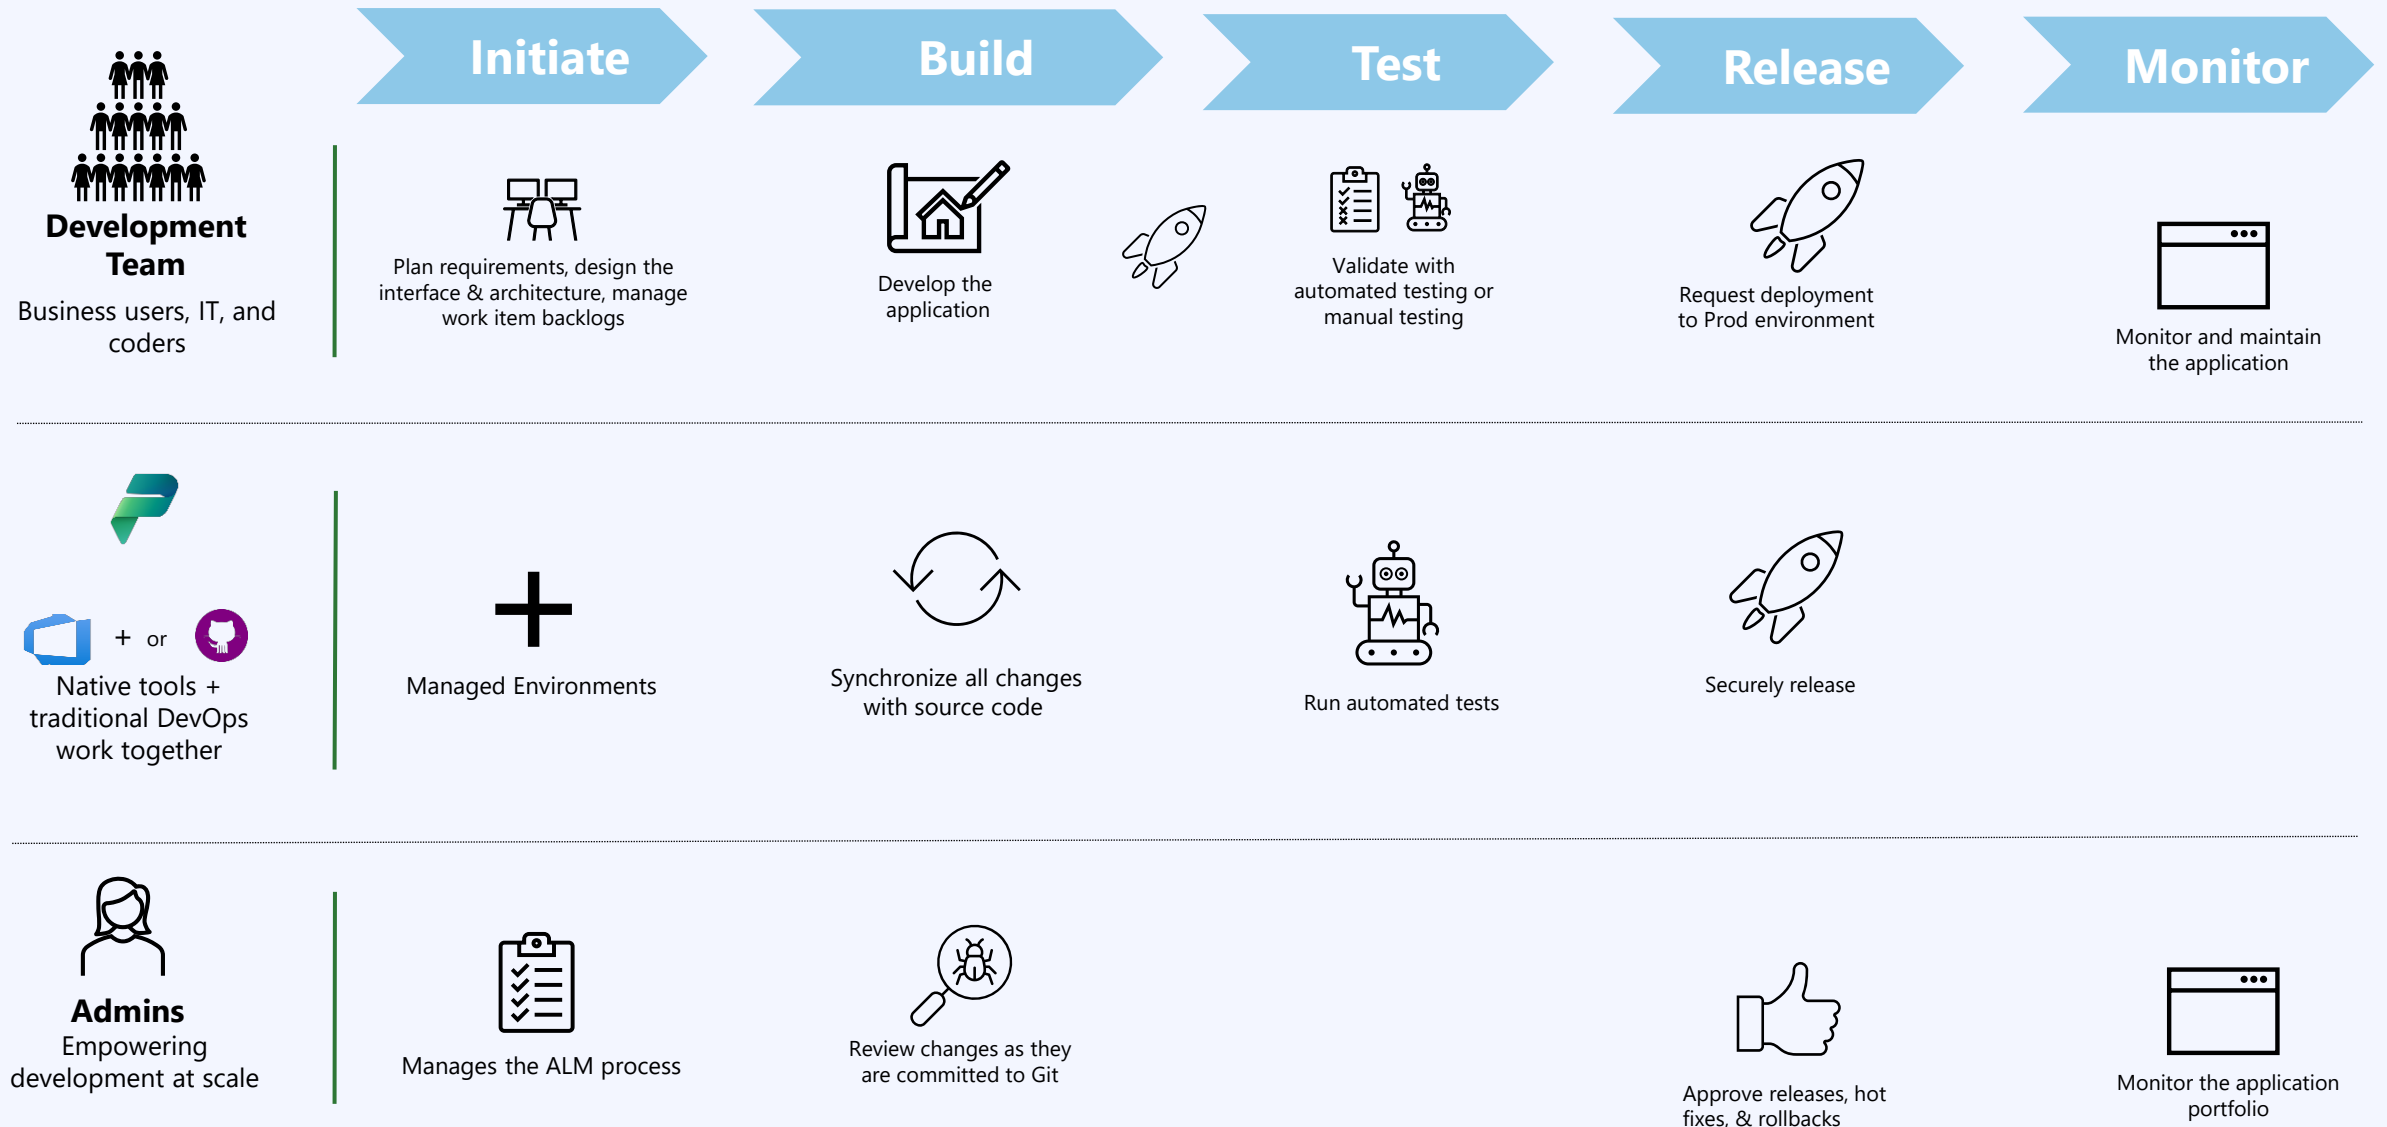

Pipelines Adoption

“This is the first feature in #PowerPlatform Managed Environments that makes premium licensing requirement a deal worth seriously considering.”

– Jukka Niiranen, MVP

The bigger ALM picture

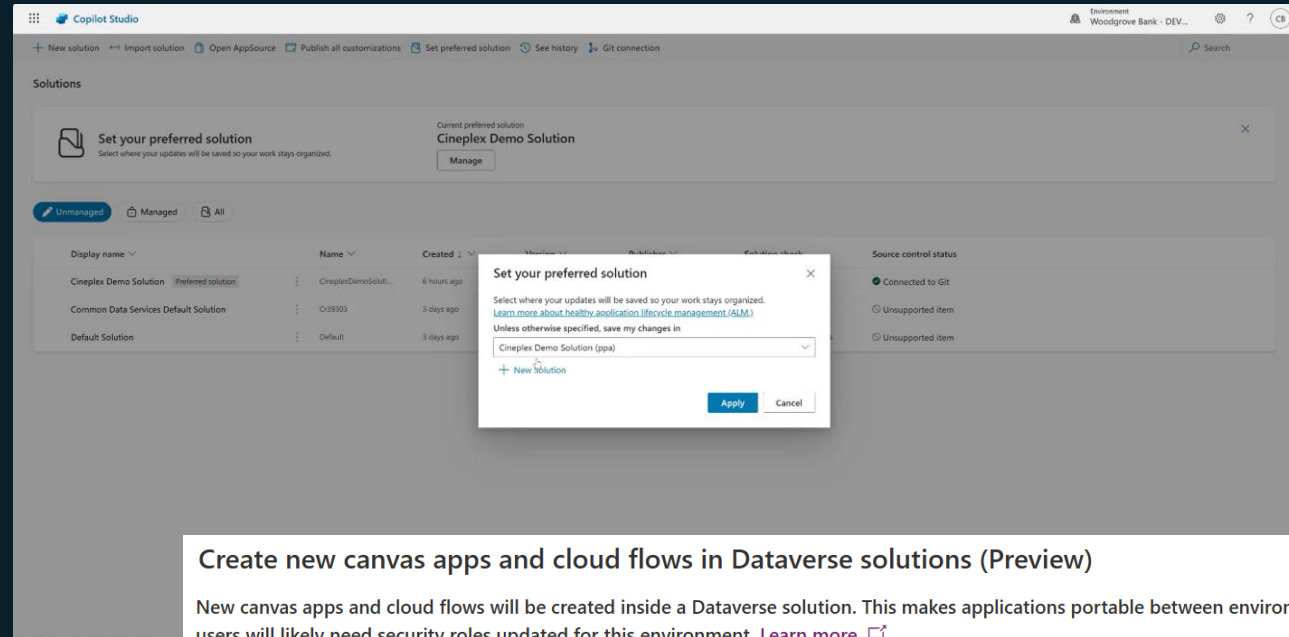

How to **initiate** healthy ALM org-wide

Preferred Solution

Generally Available

- Stores customizations by default
- Works across all maker experiences
- Starts every maker with "healthy" ALM
- Use with Solutions by Default (Preview)

Create new canvas apps and cloud flows in Dataverse solutions (Preview)

New canvas apps and cloud flows will be created inside a Dataverse solution. This makes applications portable between environments. Note: With this setting on, your users will likely need security roles updated for this environment. [Learn more](#)

- ☒ Canvas apps
- ☒ Cloud flows

Delegated Deployments (SPN)

Generally Available

- **Makers** deploy to production without needing elevated permissions
- AI generated deployment notes make it easy to **approve** or reject deployments.
- **Admins** keep production data and applications protected with least privileged access

The screenshot displays the 'Power Apps | Deployment Pipeline Configuration' interface. The left sidebar shows navigation options: Home, Recent, Pinned, Overview, Pipelines Dashboard, Pipeline Setup (Environments, Pipelines), Deployments (Run history, Solution artifacts), and Solution artifacts. The main content area is titled 'Contoso delegated pipeline - Saved' and shows the 'General' tab. It includes a message 'To enable this content, save the record.' and a table for 'Linked Development Environments'. Below this is a table for 'Deployment Stages (Deployment Pipeline)'.

Name	Environment Type	Environment ID	Validation Status
[Pipelines Master] Dev Env	Development Environment	73106688-5209-ee04-8ea7-61b5b93ad2f9	Success

Name	Deployment Pipeline	Previous Deployment	Target Deployment	Is Delegated	Pre-Deployment	Created On
Contoso Production	Contoso delegated pi...	[Pipelines Master] Pro...		Yes	No	9/7/2023 5:44 PM

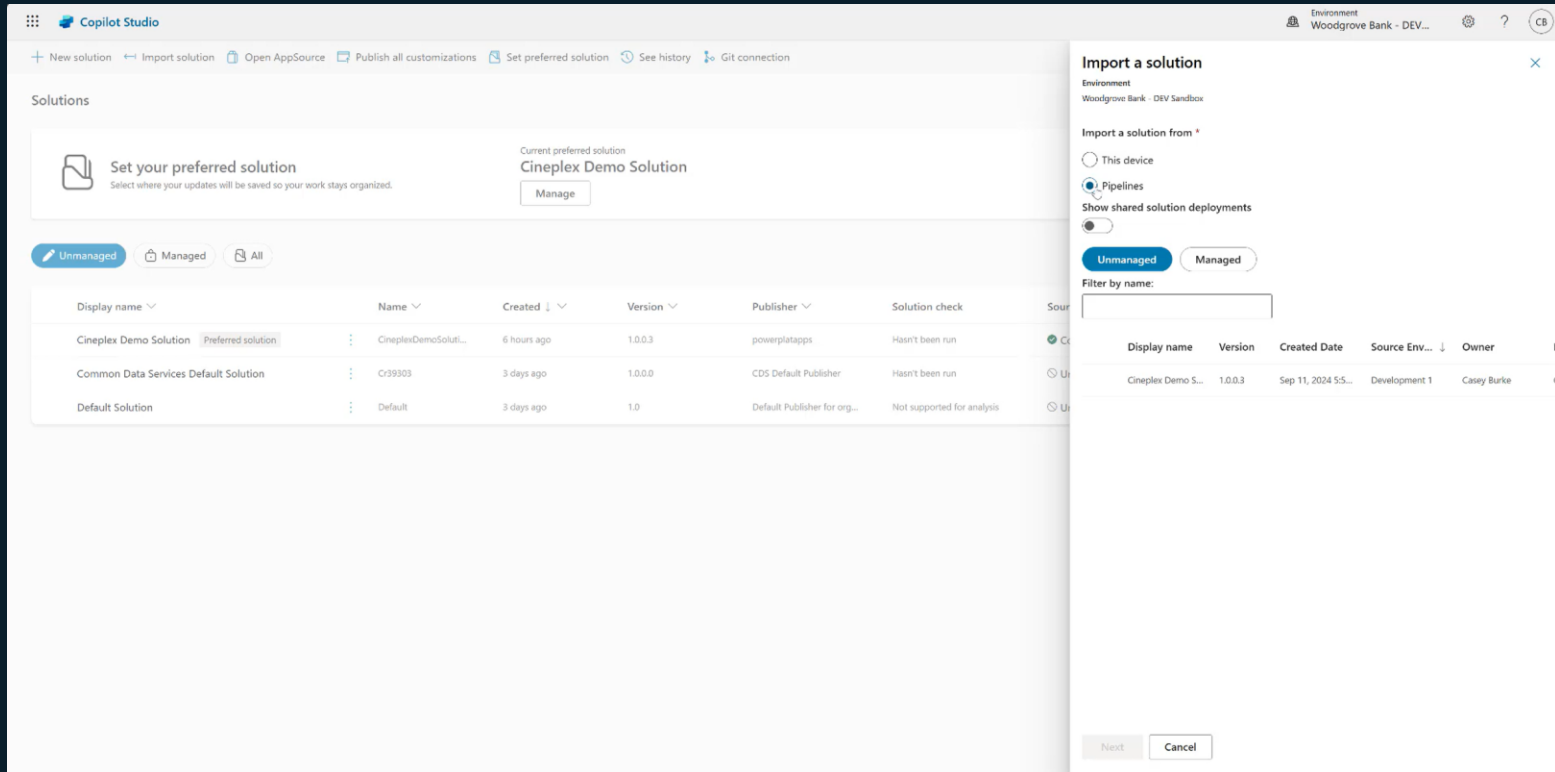

Fusion team development with **native source code**

Import from Pipelines

Coming Soon!

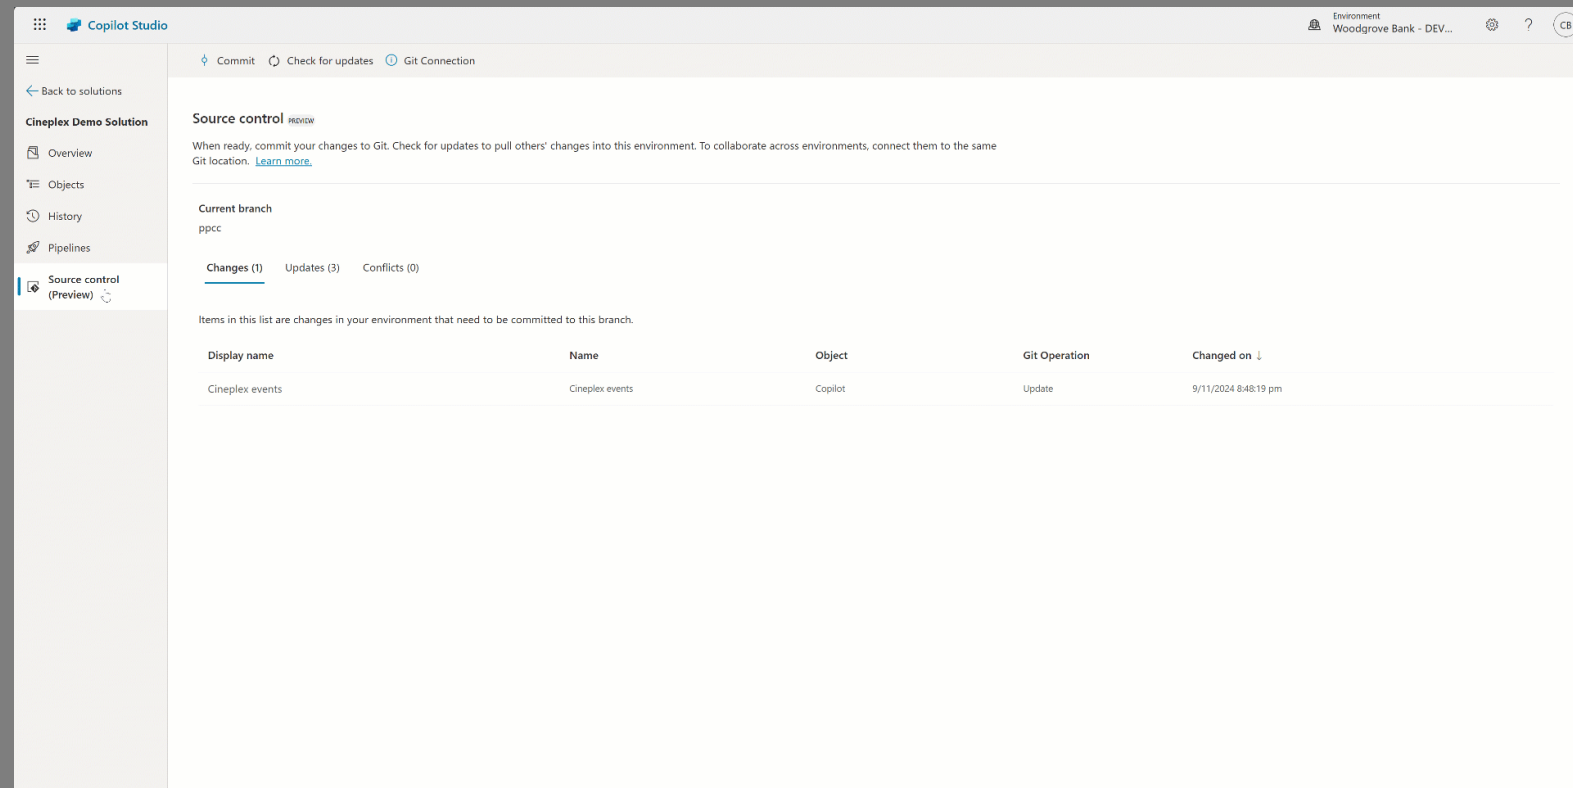

- Pipelines stores backups of every solution deployed
- Makers can now pickup right where they left off
- Never lose your solution again!

Native source code integration

Limited Preview

- > **Connect in seconds**
No tools to setup
- > **Fusion development** across N environments and source control
- > **Simple, powerful Git version control** for all of Power Platform
- > **Work safely** with branches, code reviews, and backups in **Azure DevOps** repositories

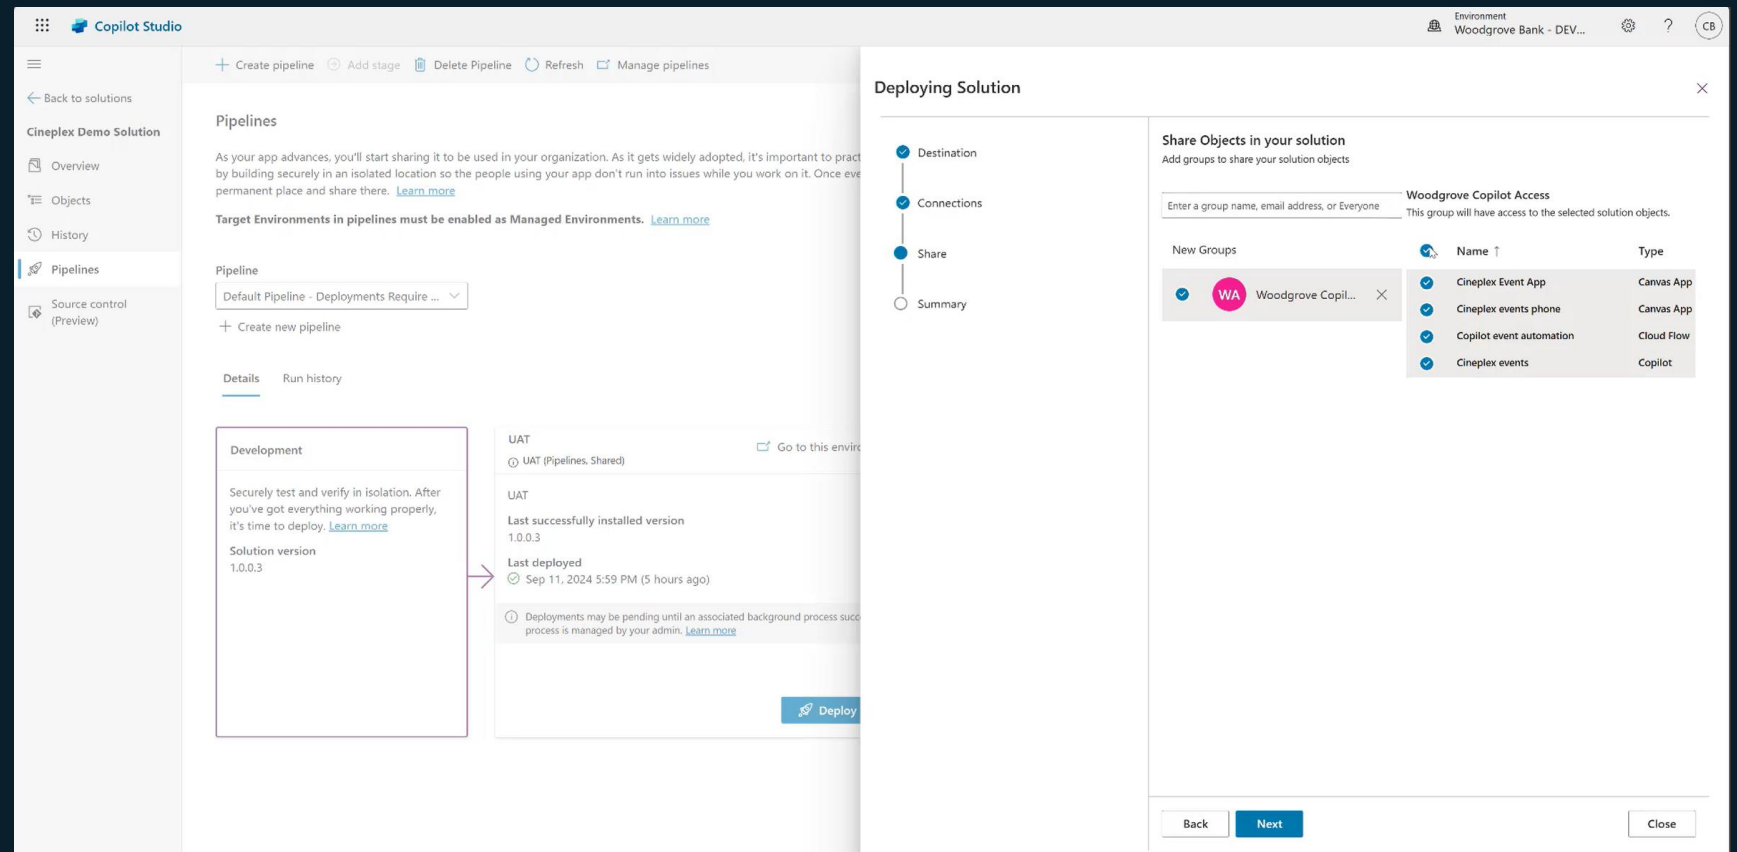

Release securely with **Pipelines** in Power platform

Sharing during deployment

Generally Available

- > Securely deploy with service principals
- > Makers "request" sharing
- > Approve or reject sharing with deployment

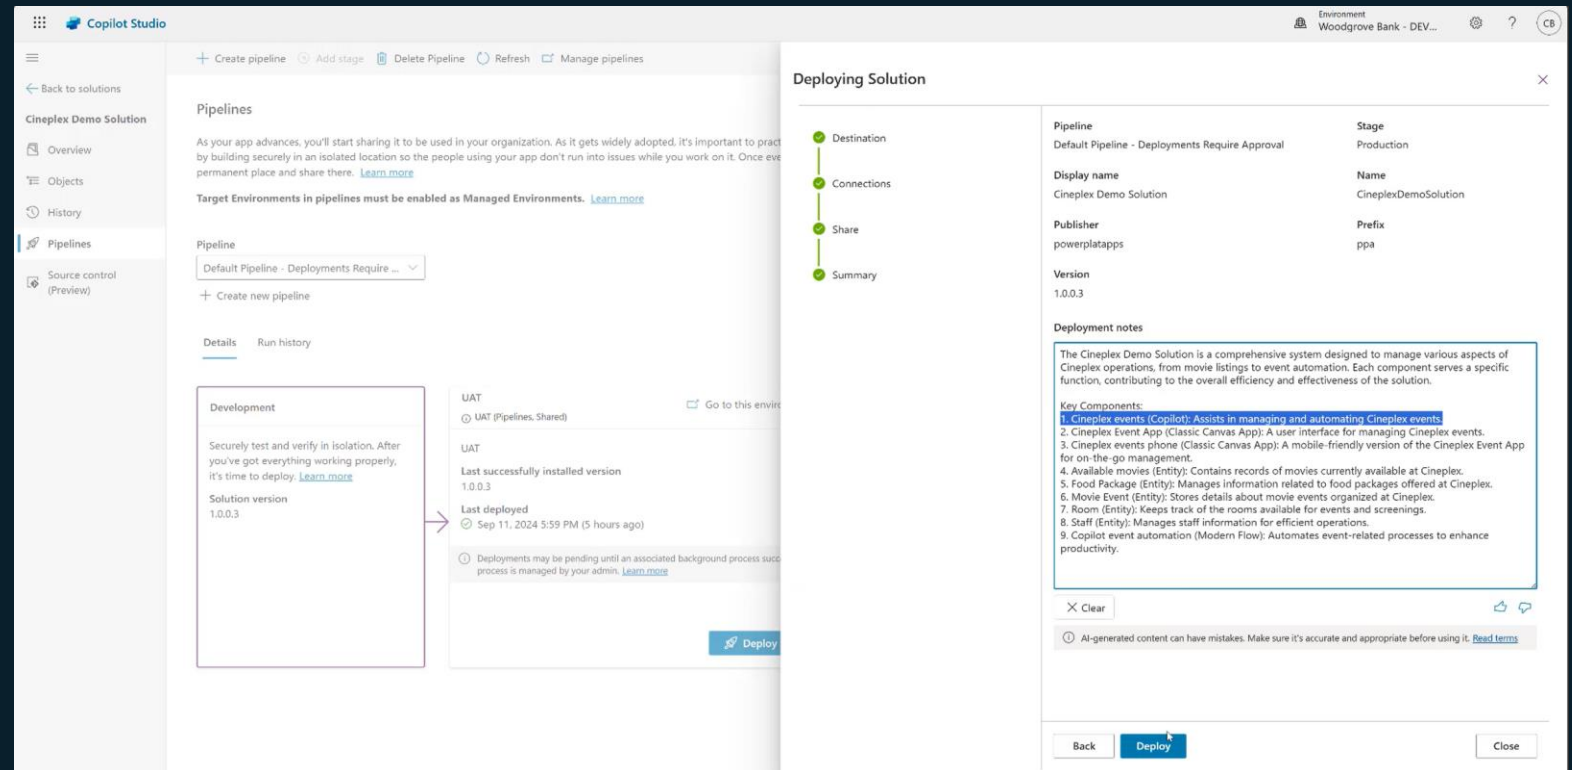

New Copilots now supported!

Deployment Notes

Generally Available

- Copilot generates deployment notes for pipeline deployments
- Gives admins insights into every deployed solution with zero effort
- Streamlines approvals

New Copilots now included in key components!

Discoverable Custom Host

Coming Soon

- > Makers can self-onboard new dev environments to pipelines they can access
- > Admins can share governed pipelines and restrict the creation of personal pipelines
- > Centralized management provides better visibility and control with less effort

The screenshot shows a web application interface for configuring a custom pipelines host. On the left is a sidebar menu with the following items: 'Pinned' (with a dropdown arrow), 'Overview', 'Pipelines Dashboard', 'Pipeline Setup' (with a sub-menu containing 'Environments' and 'Pipelines'), 'Deployments' (with a sub-menu containing 'Run history' and 'Solution artifacts'), and 'Settings' (with a sub-menu containing 'Security Teams' and 'Advanced Settings', which is currently selected). The main content area has a toggle switch at the top set to 'Yes'. Below this are 'Save' and 'Cancel' buttons. The section is titled 'Use a custom pipelines host' and contains explanatory text: 'Provide a custom pipelines host environment ID to set a new default pipelines host for the tenant. Once set, all pipelines will be retrieved from the custom host specified below. In custom hosts, users cannot create pipelines unless granted specific permissions. Please ensure the pipelines host is valid. [Learn more](#)'. Below the text is a text input field labeled 'Pipelines host environment ID'. A red warning message follows: 'Warning: Users will lose access to any existing pipelines within the current host. The data in this host will not be removed, but an admin must recreate environment records and pipeline records within the new host to enable users to continue using Pipelines.' At the bottom of the main area are 'Set host' and 'Remove' buttons.

Use a custom pipelines host

Provide a custom pipelines host environment ID to set a new default pipelines host for the tenant. Once set, all pipelines will be retrieved from the custom host specified below. In custom hosts, users cannot create pipelines unless granted specific permissions. Please ensure the pipelines host is valid. [Learn more](#)

Pipelines host environment ID

Warning: Users will lose access to any existing pipelines within the current host. The data in this host will not be removed, but an admin must recreate environment records and pipeline records within the new host to enable users to continue using Pipelines.

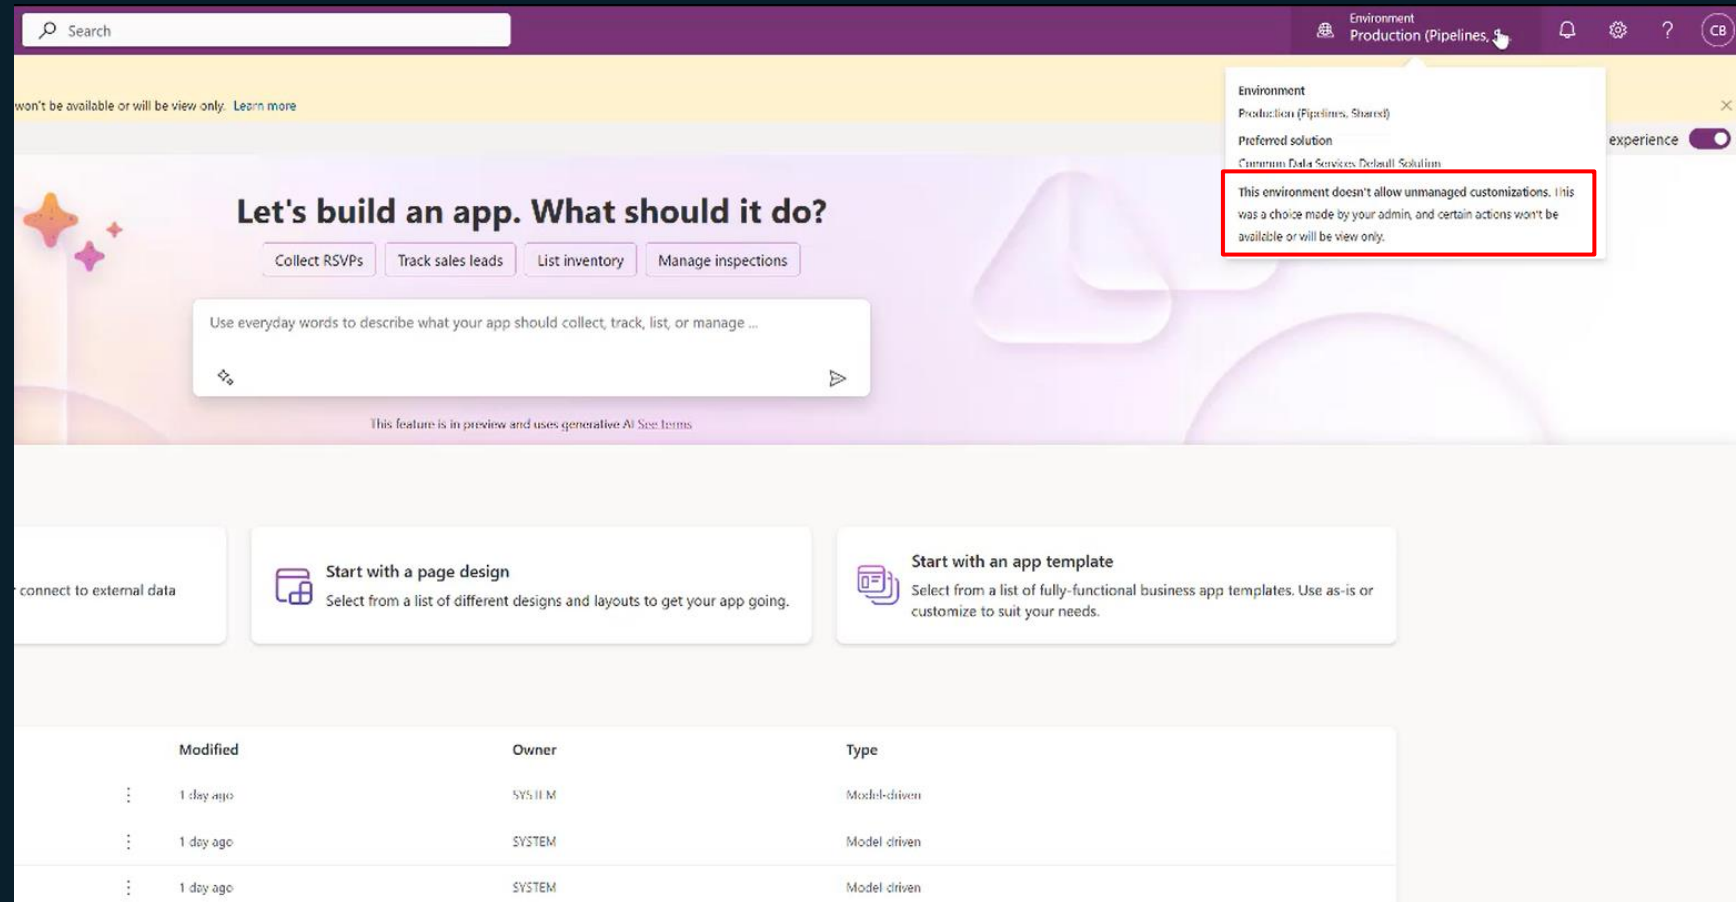

Set host Remove

Block unmanaged customizations

Generally Available

> Block dev-in-prod

> All changes are reviewed, versioned, approved, then deployed

Live Demo

Next Steps
